To dismantle and to assemble 2-12.4B

To dismantle

- ① Clean the outside surfaces of the fuel lift pump.
- ② Make a mark across the flanges of the two halves of the pump to ensure correct relationship when the pump is assembled.
- ② Remove the cover (A1) and the gauze (A2). Release the setscrews and separate the two halves of the pump.
- ④ Turn the diaphragm assembly (A5) 90° to release the pull rod from the link arm (A8) and remove the diaphragm assembly. Remove the stem seal (A6), the spring seat washer (A7) and the spring (A12) from the pull rod. The diaphragm and pull rod assembly is renewed as an assembly and no service is possible on the diaphragm.
- ⑤ The valves (A4) are peened in and can be removed with a suitable lever. Some of the peened metal will have to be removed before the valves can be removed.
- ⑥ To remove the link arm: Hold the rocker lever (A11) in a vice and hit the body of the lift pump with a soft face hammer to release the two retainers (A10). Be careful not to damage the joint face of the pump body. Remove the rocker lever, the pin (A9), the link arm and the return spring. Check the components for wear and other damage.

To assemble

- ① Thoroughly clean the valve housings. Fit new seat washers (A3) and push the new valves (A4) into position. As the valves are the same, but one valve is fitted in reverse of the other, it is possible to fit the valves upside down. To ensure that the valves are fitted correctly, fit them as shown in A. When the valves are correctly fitted, peen the edge of the valve housings in six places, evenly divided, to keep the valves in position.
- ② Fit the rocker lever (A11), pin (A9) and link arm assembly (A8) into the bottom half of the lift pump. Fit the return spring; ensure that the ends of the spring are in their correct location.
- ③ With a light hammer and a suitable adaptor, fit two new retainers (A10) in their grooves in the casing until they fasten the pin. Peen the open ends of the grooves to fasten the retainers in position.
- ④ Fit the diaphragm spring (A12) into its location under the diaphragm (A5) and put the spring seat

- washer (A7) and a new stem seal (A6) into position on the pull rod. Ensure that the small diameter at the top of the seal is on the round section of the pull rod.
- ⑤ Put the diaphragm assembly in position over the lower half of the body with the blade of the pull rod aligned with the slot in the link arm. Press lightly down on the diaphragm until the notch in the pull rod is in the slot in the link arm and turn the diaphragm 90° in either direction. This action will engage and retain the pull rod in the slot of the link arm.
- ⑥ Push the rocker arm towards the pump body until the diaphragm is level with the body flange and fit the top half of the body in position with the marks on the flanges aligned. Keep the pressure on the rocker arm; fit the spring washers and the screws and tighten them evenly.
- ⑦ Fit the gauze filter (A2) and the cover (A1), ensure that the rubber seal (A13) is fitted correctly and tighten the screw.

- Room lights: Press to turn on, and press again to turn off.
- Operating light(Front, rear): Place switch to ON and the indicated light will be turned on.
- Heater switch: Turning to ON position, activates the heater with the warm wind from warm wind inlet.

- Air-conditioning switch: Operating switch changes the level of cold wind.
- Engine stopping solenoid: Turning starting switch to ON, opens the valve and lets the fuel flow and turning to OFF closes the valve to cut off the fuel.

- Parking brake switch: Placed under the parking brake, turned ON by pulling parking brake and lights the parking lamp ON the control panel.
